Project: Retail Sales Dashboard - Business Interpretation

Business Interpretation

1. Sales Target Achievement (Clustered Column):

Clothing target was 174K but achieved only 139K - underperformed. Electronics exceeded

target - 164K actual vs 127K target. Furniture nearly met target. Electronics is star performer.

2. Profit Margin by Sub-Category (Donut):

Highest profit margin sub-categories are small items like Stole, Handkerchief, Furnishings. But they have low sales volume - high margin but low revenue.

3. Monthly Sales Trend (Line Chart):

Sales peaked in Feb-March (60K) then crashed April-August (10K-20K). Recovered Oct-Dec. Clear seasonality - Q1 is best, Q2-Q3 is weak. Need to plan inventory for this dip.

4. Profit vs Quantity (Scatter):

No direct relation - even low quantity (1-2) gives high profit up to 2K. High quantity doesn't mean high profit. Some orders with 10+ quantity have 0 or negative profit - discount issue.

5. Total Sales vs Target (Cards):

Total Sales = ₹431.5K, Target = ₹435.9K - Overall shortfall of ₹4.4K (1% gap). Very close to target but missed due to Clothing underperformance.

6. Sales Performance Matrix (Matrix):

Matrix shows year 2018 vs 2019. 2019 total target 48K but achieved 44K. Monthly breakdown shows consistent underperformance in summer months.

7. Geographic Sales (Map):

Western India (Mumbai, Pune, Indore) shows biggest bubbles - highest sales. Central India cluster strong. Eastern and Southern cities very small - regional imbalance matches your Order Count funnel.

8. Sales Distribution Treemap:

Your treemap shows Printers (58K), Bookcases (57K), Saree (54K), Phones (46K) are top 4. Electronics and Furniture together = 60%+ revenue.

9. Order Count by State (Funnel Chart):

Your funnel proves it - MP 101 + Maharashtra 90 = 191 out of ~500 orders (38%). Top-heavy funnel. Tamil Nadu 8, Sikkim 12 lowest - shows distribution channel is weak in South/North-East.Final Business Recommendation (3 lines for assignment):

Business is dependent on 2 states and 4 sub-categories. It missed annual target by 1% due to Clothing and Q2-Q3 seasonal dip. To grow, focus marketing in Tamil Nadu/Karnataka, push high-margin Electronics, and reduce discount on high-quantity low-profit orders.

Key Insights:

1) Sales Target: Total sales ₹4.31L vs target ₹4.35L - missed by 1% due to Clothing underperforming (139K vs 174K target). Electronics over-achieved.

2)Profit & Product: Treemap shows Printers (58K), Bookcases (57K), Saree (54K) are top sellers. High profit margin items like Stole/Handkerchief have low sales volume.

3)Region: Map + Funnel (Order Count by State) shows business is concentrated in Madhya Pradesh (101) & Maharashtra (90). Tamil Nadu (8), Sikkim (12) are lowest - weak South India presence.

4)Trend: Monthly sales peaked Feb-Mar (60K) and crashed in Q2-Q3, showing seasonality.

Conclusion:

In conclusion, the business is currently dependent on 2 states (MP & Maharashtra) and 4 sub-categories (Printers, Bookcases, Saree, Phones) for its survival. To achieve sustainable growth and meet future targets, the company must defend its strongholds in MP and Maharashtra, while aggressively expanding in weak markets like Tamil Nadu, Karnataka, and Kerala. It should focus its inventory and marketing budget on the top 4 money-making sub-categories, control discounts on bulk orders to fix profit leakage, promote high-margin products, and introduce off-season offers to overcome the Q2-Q3 seasonal dip.
